

Have there been any scientific studies completed for Remote Light on drinking water purification?

Yes. We have a complete report that was conducted by Philip B. Carter, Ph.D. and James R. Flowers, Ph.D. Both men are with the NCSU College of Veterinary Medicine, Dept. of Microbiology, Pathology, Parasitology. We also have a report comparing the Remote Light prototype device to a commercial bottled water distributor. This report was completed using EPA standards by Kurt Garrett, National Science Foundation Fellow, Duke University.

Please refer to the "Scientific Studies" area of this website for the above studies.
